EDUCATION

İnönü University
B.Sc. Software Engineering
Senior · 4th Year · Expected 2027
Malatya, Türkiye

LANGUAGES

Turkish — Native
English — B1 (Intermediate)

SKILLS

LANGUAGES
Python · Java · Kotlin · Dart · TypeScript ·
JavaScript · SQL · R

FRAMEWORKS
Playwright · FastAPI · Spring Boot ·
React / Next.js · Flutter · Jetpack
Compose · Tailwind

TOOLS & DATABASES
PostgreSQL · Docker · Git · Linux ·
Android Studio · Redis · PostGIS · CI/CD

AI / ML & VISION
OpenCV · LSTM · River (online learning) ·
Reinforcement Learning · Novelty
Detection · Groq / LLaMA

Emircan Can

AI DEVELOPER · FULL-STACK ENGINEER · TEST AUTOMATION ENGINEER

"I build intelligent systems that solve real-world problems."

01 // PROFILE

Fourth-year Software Engineering student at İnönü University building across full-stack web, mobile, AI/ML and test automation. I design resilient systems and prove they work with end-to-end automation — from edge-AI telemetry under severe bandwidth limits to offline mesh disaster communication. I care about code that is performant, measurable and reliable.

02 // EXPERIENCE

Playwright Test Engineer · Codenorm Jul 2025 – Present · Remote

- Design, build and maintain enterprise end-to-end automated test suites with Playwright and TypeScript.
- Write resilient locator strategies, cross-browser regression suites and automated visual tests.
- Integrate tests into CI/CD pipelines to catch critical regressions before production releases.

Playwright · TypeScript · Node.js · CI/CD · Test Architecture

Full-Stack Developer Intern · AIHexa Jul 2026 – Aug 2026 · Hybrid

- Built responsive front-end interfaces and integrated REST / GraphQL backend services.
- Implemented state management, real-time data sync and high-performance database queries.
- Delivered production features on an agile team under sprint deadlines.

React · Next.js · TypeScript · Python / FastAPI · PostgreSQL · Docker

03 // SELECTED PROJECTS

★ **SENTINEL OS** Hackathon · 2nd

Autonomous edge-AI for a Mars rover that decides on-device which sensor data is worth sending to Earth under tight bandwidth and a 3-22 min light delay. Fuses three learning paradigms — offline LSTM errors, River online learning and a reinforcement-learning Q-table — with novelty detection and real lossless delta + zlib compression across a 3-tier Rover → Orbiter → Earth architecture.
FastAPI · PostgreSQL · SQLAlchemy async · WebSocket · React · Three.js · Leaflet · Docker

★ **Acil Afet** İnüfest

Offline emergency-communication app. When cellular networks and power collapse after a disaster, people keep messaging each other directly over a device-to-device mesh — no cell tower, Wi-Fi or internet required.
Mesh Networking · Offline P2P · Bluetooth LE · Wi-Fi Direct · Mobile

InternMeet

Full-stack internship platform connecting students with companies — role-based access, application tracking and transparent company reviews.
Spring Boot 3 · Java 17 · React 19 · PostgreSQL · JWT · Docker

ForestEye

Forest-fire early-warning system predicting high-risk zones from NASA FIRMS satellite + weather data on a 10 km grid, with multi-channel SMS / email / push alerts.
FastAPI · React · PostGIS · Leaflet · Redis · Docker

ELION

Offline-first personal assistant with voice-command task creation and an honest, AI-style morning briefing and evening review — 100% on-device.
Kotlin · Jetpack Compose · Room · Hilt · MVVM

CryptoStealth

Security tool fusing cryptography and steganography: AES-256 / RSA-2048 hybrid encryption hidden inside PNG pixels via LSB, with decoy layers and SHA-256 integrity checks.

Python · AES-256 · RSA-2048 · LSB Steganography

Also built: Deadlock (Flutter puzzle, BFS solver) · PhonePad (Android Bluetooth HID mouse) · ScreenBridge (OpenCV gesture window manager) · PixelPop (Kotlin game) · SignVoice · OpenCV Playground — github.com/emir-canswe

04 // ACHIEVEMENTS

🏆 Malatya Hackathon — 2nd Place

2025

Built and demonstrated SENTINEL OS, an autonomous edge-AI decision engine for Mars-rover telemetry, on real NASA anomaly data.

🎓 İnüfest — Project Showcase (Presenter)

2024

Presented "Acil Afet", a peer-to-peer mesh communication app for civilian messaging during disaster-induced infrastructure failure.
